

Software Development Engineer (SDE) Analyst

Location: Bengaluru, India (Hybrid)

Department: Core Engineering & Analytics

Job Type: Full-Time / Entry to Mid-Level

Experience Level: 0 - 2 Years

Application Deadline: Open Until Filled

Job ID: GTS-SDE-2026-88

ABOUT THE ROLE

We are seeking a highly analytical and technical **Software Development Engineer (SDE) Analyst** to join our high-performing engineering team. In this role, you will bridge the gap between software development, data analysis, and system security/performance optimization. You will design, build, test, and analyze scalable software components while driving operational performance through rigorous problem-solving.

KEY RESPONSIBILITIES

- Software Development & Refactoring:** Write clean, efficient, maintainable code across full-stack backend components, APIs, and analytical pipelines.
- Data & Performance Analysis:** Analyze application logs, system metrics, and execution telemetry to identify performance bottlenecks and software vulnerabilities.
- Automated Testing & Security Benchmarking:** Implement robust automated unit, integration, and security test suites.
- Collaborative Problem Solving:** Work closely with DevOps, Security, and Product teams to troubleshoot software defects and deliver reliable releases.

CANDIDATE EVALUATION RUBRIC & QUALIFICATIONS

Our recruitment team evaluates candidates holistically across key technical, practical, and academic parameters:

Category	Minimum Criteria	Preferred / Ideal Profile
Education & CGPA	B.E. / B.Tech / M.Tech in CS, IT, ECE, or related field. Min CGPA: 7.5 / 10.0 (or equivalent).	CGPA 8.5+ / 10.0 from a recognized institution with strong fundamentals in Data Structures, OS, and Algorithms.
Work Experience & Internships	At least 1 relevant software engineering or data analysis internship (3+ months).	6+ months experience across technical internships (e.g., SDE Intern, Backend/SecOps Intern) with hands-on production code contributions.
Competitive Coding & Security Platforms	Active profiles on platforms like LeetCode , HackerRank , or TryHackMe .	LeetCode/HackerRank: 300+ problems solved (Rating 1600+). TryHackMe / HackTheBox: Top 15% ranking or active CTF

Category	Minimum Criteria	Preferred / Ideal Profile
		participation demonstrating security awareness.
Key Projects	2+ complete projects demonstrated via GitHub (e.g., RESTful APIs, Web Apps, Analytics Dashboards).	End-to-end full-stack or systems project featuring microservices, database optimization, cloud deployment (AWS/GCP), or CI/CD pipelines.
Certifications	foundational tech certifications or completion of structured software tracks.	Industry recognized credentials: • Cloud: AWS Certified Developer / Solutions Architect. • Security/Analytics: CompTIA Security+, eJPT, or Google Data Analytics.
Extracurriculars & Leadership	Active involvement in college technical clubs, hackathons, or open-source communities.	Hackathon winners/finalists, open-source contributors (PRs merged in active repos), or leadership in tech communities/workshops.

REQUIRED SKILL SET

Python / Java / C++

SQL & NoSQL

Data Structures & Algorithms

REST APIs

Git & GitHub

LeetCode / Problem Solving

TryHackMe / Cybersecurity Basics

Linux / Scripting

Docker

CI/CD & Cloud Basics

APPLICATION INSTRUCTIONS

Interested candidates should submit their application including:

- Updated Resume (PDF format).
- Links to **GitHub profile**, **LeetCode profile**, and **TryHackMe / CTF handles**.
- Proof of official transcripts / academic CGPA and relevant certifications.
